

# Working with Strings in Java

String representation

## By the end of this video you will be able to...

- Describe how Strings are represented in Java
- Perform basic operations with Strings in Java

$$\text{Flesch score} = 206.858 - 1.015 \left( \frac{\# \text{ words}}{\# \text{ sentences}} \right) - 84.6 \left( \frac{\# \text{ syllables}}{\# \text{ words}} \right)$$

**Requires the ability to manipulate Strings!**

# String Basics

**Strings are objects**

```
String text = new String("Hello World!");
```

text 

# String Basics

Strings are objects

```
String text = new String("Hello World!");
```

The heap

text

"Hello World!"

# String Basics

Strings are objects

```
String text = new String("Hello World!");
```

The heap

# String Basics

Strings are represented as arrays of chars.

```
String text = new String("Hello World!");
```

The heap

# String Basics

```
String text = new String("Hello World!");
```

The heap

# String Basics

```
String text = new String("Hello World!");  
String text2 = text;
```

# Strings are immutable

```
String text = new String("Hello World!");  
String text2 = text;
```

The heap

# String append

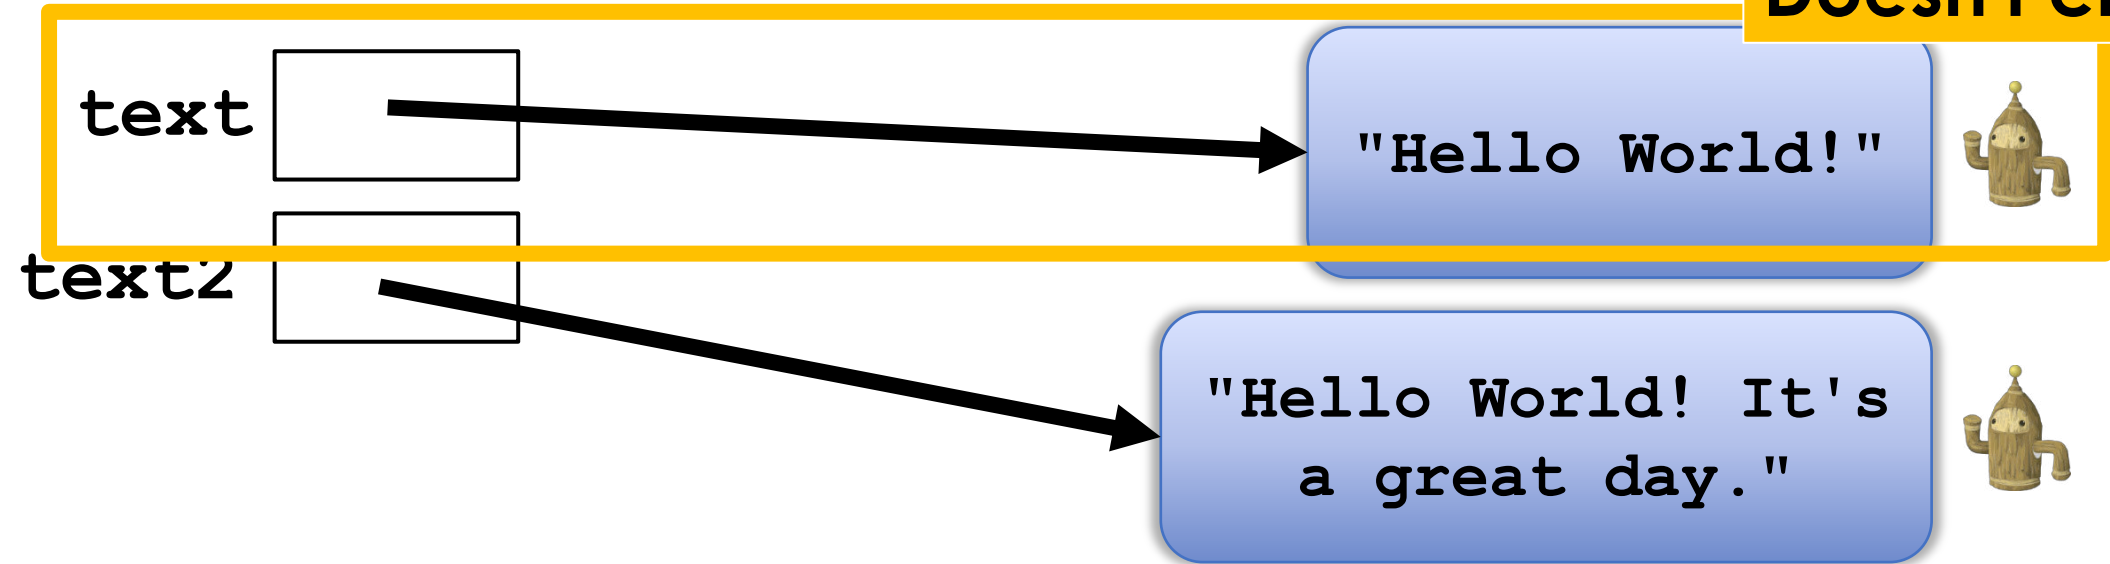

```
String text = new String("Hello World!");  
String text2 = text.append(" It's a great day.");
```

## + operator also does append

```
String text = new String("Hello World!");  
String text2 = text + " It's a great day.";
```

Doesn't change

# Interned Strings: One object

```
String text = new String("Hello World!");  
String text2 = "Hello World!";  
String text3 = "Hello World!";
```

# .equals vs ==

```
String text = new String("Hello World!");  
String text2 = new String("Hello World!");  
text.equals(text2) // Evaluates to true  
text == text2 // Evaluates to false
```

**.equals compares characters**

# .equals vs ==

```
String text = new String("Hello World!");  
String text2 = new String("Hello World!");  
text.equals(text2) // Evaluates to true  
text == text2 // Evaluates to false
```

**== compares  
variable values  
(references)**

# Strings can do lots of things!
